

**ABSTRACT OF THE DISCLOSURE**

Improved organophotoreceptor comprises an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive element comprising:

- 5 (a) a charge transport material having the formula

where R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, and R<sub>4</sub> are, independently, an alkyl group, an alkaryl group, an aryl group, or a part of a cyclic group;

R<sub>5</sub> is hydrogen, an alkyl group, an alkaryl group, an aryl group, or a heterocyclic  
 10 group;

X comprises an aromatic group, such as an aryl group or an aromatic heterocyclic group;

Y is a linking group; and

Z comprises an epoxy group; and

- 15 (b) a charge generating compound.

Corresponding electrophotographic apparatuses and imaging methods are described.
